

## TUCAL VERTICAL PLATE FREEZERS RUSSIAN TYPE

The main characteristics of these units are:

- Blocks 800x250x65 mm, with horizontal dividers made of PE500, fixed with **clip system** (for easy operation, only with one hand).
- **Front and top covers** for isolation, made of PE500, and designed for easy handling and cleaning. The design of the dividers prevents the top covers from falling despite the movement of the vessel.
- **Side covers**, made of AISI304 stainless steel, to prevent the product from falling during the loading process.

According to our standard, **all the structure is made of AISI304 stainless steel**, and plates are made of **aluminium of high mechanical and anticorrosive resistance**. All the freezers are built with high quality materials, appropriate to work even under the toughest conditions.
